Mission Statement

• Duke Energy adopted the Meter Equipment Group (MEG) approved meter enclosure list to standardize self-contained meter enclosures across the Duke Energy enterprise to ensure that such equipment is safe and reliable.
Background

• Duke Energy has different yet similar specifications for enclosures across the enterprise.
• When enclosure issues arise they are handled on a case by case basis with each jurisdiction handling the situation differently.
• Some enclosures have been grandfathered into acceptance without a formal review.
• As incidents arise products need to be reevaluated.
Motivation

• In order to ensure the company is operating safely and consistently all areas shall comply with a single overarching specification.

• Manufacturers:
  • A single standard will simplify the required stock.

• Contractors:
  • A published unified approval list will ensure the correct enclosure is installed.
Multiple utilities have joined the MEG because the approved list provides a thorough review process ensuring safe equipment.

Governing Participants:
- Duke Energy
- Florida Power & Light
- Gulf Power Company
- Oklahoma Gas & Electric
- Tampa Electric
Specifications

• The MEG specifications cover:
  • Construction material
  • Spacing
  • Wiring
  • Grounding
  • Socket jaws

• Terminal connectors
  • Manual lever bypass
  • Knockouts/hubs
  • Sealing/tampering
  • Markings
Approved Manufacturers

• Manufacturers:
  • Durham
  • Eaton B-Line
  • Eaton-Cutler Hammer
  • Elec.Prod.
  • Emerson
  • General Electric
  • Landis & Gyr/Talon
  • Midwest
  • Milbank
  • Murray
  • Siemens

Scope

• The MEG requirement will be applicable to all new self-contained meter enclosure installations.

• If a repair requires the meter enclosure to be changed, then an MEG approved enclosure is required.

• If a service repair is performed without interfering with the existing meter enclosure it is not required to replace the existing enclosure with an MEG approved enclosure.
Temporary Services

- Meter sockets currently installed on existing temporary service poles or boards used for temporary construction services can continue to be used.
- Newly constructed temporary construction service poles or boards should be built with MEG approved sockets.
Locating Approved List

• To review the latest MEG approved equipment list take the following steps:
  • Visit www.duke-energy.com
  • Enter “approved enclosure” in the search box
  • Click the search result titled “[PDF] Enclosure List: Approved Meter Equipment”

Our Commitment

• We understand…
  • that this requirement will take a certain degree of change management.

• We believe…
  • the long term benefits to customers and electric delivery personnel of using standardized meter enclosures (that have been inspected by utility personnel and field tested for safety and ease of use) far outweigh the short term difficulties.

• We appreciate…
  • your understanding and cooperation.
